One of our favorite aspects of Minecraft would be building Minecraft Homes. Depending on the mode you play, you can put up a home of your unique design just about anywhere. There are no conditions, no limits set, and virtually no limits (except for the actual scheduled physics of the game). If you want to build your home on top of a You. If you want to build it under the ground, you can. This is the magic of Minecraft, and that's what you're going to explore in this article today: Minecraft homes, and how creatively flexible they can get! But before that, let's start with some basic buildings. You can upgrade as you collect more resources, but the whole point of a home - at least at first - is to have a safe spot that you can retreat when things start to give birth. But yes, we'll give you some generous/smart/creative home concepts that you can build in Minecraft later in this article, so stay tuned! For now, let's start with a quick tutorial on how to build a home in Minecraft. Just the basics! Step 1: Build wallsplace blocks under one on top of the other to make walls. The height and length of your walls will depend on how many blocks you put down vertically and horizontally. You can use more any barrier for walls, such as dirt, sand, wood, gravel, or cobblestone. Keep in mind, though, that wood blocks will make a building more sensitive to fire. Step 2: Make a RoofOnce your walls are finished, you can create a roof by placing blocks on them. Make sure you put them side by side! As with walls, you can use almost any material. However, you cannot use sand or gravel for the roof. They're going to fall apart. Step 3: Add the DoorsDoors can be done through handicrafts. You will need six (6) planks of any building material. Arrange them in the first two columns of the handicraft table, in a 2-by-3 formation. You can do as much as you need and as much resources as you will allow. Step 4: Don't forget LightMonsters give birth in the dark, so remember to add plenty of torches in and around your home! Torches are pretty easy to construct, too. All you need is one (1) stick and one (2) carbon, or one (1) stick and one (1) charcoal. Either it works. Arrange the accessories on the grid of the handicraft board as shown below.ORMake make sure the stick is in the middle square and the coal or charcoal is squared above it. Step 5: Supply your houseenough that you have a safe base, you need to consider the stuff in it make it safer and more convenient (like a real home)! For example, building some chests for storage can help you equip yourself with more items and resources. Having a bed of your own can help with your rest and laying point. And having an oven in your home can be great for preparing food, melting ore, and building other various bars. You can make a bed using three (3) woolen tumors and three (3) (3) (any wood). One chest requires eight (8) planks, also of any wood. And an oven can be made from eight (8) cobbled or eight (8) blackstones. As you progress, you will want to look at tools and items like enchanting tables and grindstones. But seeing that this is a basic home-building tutorial, a bed, an oven, and some breasts will do for now. Step 6: Decorations & Finishing TouchesOnly you're in a position where you can easily harvest materials and resources (to the point where you often have excess), you can start adding personal touches to your home in Minecraft. Consider strengthening your walls with concrete, constructing buckets to create water ponds, and adding some natural light with windows (or even stained glass windows for more paint!) all of which are pretty easy to construct, too. You just have to get the right ingredients. Concrete - 1x Dye, 4x sand, 4x GravelBuckets - 3x iron fillers (for windows) - 6x Glass BlocksCheck out how to manufacture paint, carpets, banners, stained glass and more in our comprehensive 2020 Guide to Minecraft Recipes! Now that you have the basics for building a Minecraft home down, how about some really cool housing concepts? You will be surprised how rich, complex, and completely expansive some constructions can take! As long as you have the time, creativity, and - most importantly - resources to craft everything you need, you can definitely create some incredible housing projects. too 8 Ideas for Cool Minecraft Homes. Minecraft Starter Treehouse If you're smack-dab in the middle of creeper spawns and the night is fast approaching, get on high ground - in style! Minecraft Treehouses are as nostalgic (think sunny summer afternoons in the park or hiding from annoying older siblings in your backyard) as they are tactical. High vantage point gives you a significant advantage against any enemies and mobs that come a-calling. Altitude will keep you safe from most ground floods. And if you decide to build the house on an existing tree - instead of from scratch - surrounded by other trees, you have plenty of sources for your building materials already. This Minecraft house is also quite beginner friendly, all things taken into account. All you really need is wood, wood, and more wood. As long as your base is stable, your home will be, too. But we'll let YouTube user TheMythicalSausage show you how it's done: Minecraft Farmhouse If you worry less about mobs and more about self-sufficiency, consider building your very own farmhouse. You'll need a lot of materials initially, but it will be so worth it in the long run. You are able to grow as much food as you like, harvest plenty of raw materials for future craft projects, and maybe even raise a couple of animals. And real living spaces can be as simple or as extravagant as you'd like them to be. Check out this beautiful farmhouse designed by THE JUONS MAB architecture: It's elevated, modular design gives it such a unique aesthetic. In addition, the foundation spacious enough for later extensions. Don't let the 362 pieces of oak log and 733 pieces of oak planks intimidate you. As we said earlier, the long-term results will be worth it. Pacific Minecraft Japanese HouseUp for a Little Challenge? Why not try designing a Japanese-style Minecraft home? Not Japanese, okay? That's a little different. Apply and incorporate Asian design elements into your layouts to create a peaceful and peaceful two-storey home with plenty of torches, fireplaces, and flower trees throughout. The original base and shell of the house may be a doozy to build - what with all the pillars, platforms, and sunken areas - but it's a great way to test your Minecraft-home-building insight. Try using cobbled, sandstone, or acacia wood for the foundation to really achieve that one-with-the-earth vibe. We also recommend you check out this tutorial from Jernsby0y: Intimidating All-Wood MansionThe madness many novice Minecraft players fall victim to when they start building houses is overactivation of the process. When they think of The Starter House, they think of the most basic material barriers: wood, glazing, and perhaps a cobbled roof. When they think of a mansion (or a house that is just as large and extensive), they think more complex building blocks are needed: concrete, sandstone, stone bricks, and late. Not necessarily. Just check out TheMythicalSausage's amazing mansion - made entirely of wood! Three floors and several dozen rooms made of plain wood. It's powerful, justifiable, detailed, and just as visually stunning as any big Minecraft house made of late and red brick. Urban Contemporary HouseThink a white wall, crisp-edged, modern high-rise condo doesn't belong in the world of Minecraft. Think again. JUMS MAB Architecture wows us once again with this impressive modern Minecraft build! This four-storey open build looks like it belongs to a current home or interior design magazine as a design inspiration. Bright lights, unique shell, icy spine and floor-to-ceiling windows. This may not fit Minecraft's common aesthetic, but there is no denying that it is such a treat to see Blue Suburban Build! If you want a modern construction without going full modern or full urban, why not hit the best compromise? A suburban home in Minecraft is perfectly feasible - white trim, sunny blue walls, street-view garage door, and all! Just check out Rizzial's comprehensive tutorial on this: Too cute! The tall stone foundation and raised terrace are absolutely perfect, but they are really just the highly saturated blue walls that take us. It's almost Exact! If you want three floors with spacious, well-lit interiors and all the modern amenities a Minecraft player might want, try your hand at building a modern suburban Minecraft. VII. Homestead's underground Minecraft towering over any approaching player or mob in six stories of glass, brick, stone, and concrete, why not go in the completely opposite direction? direction? the bases are cool, secretive, and highly justified. And based away from this spectacular tutorial by YouTuber ItsMarloe, you can obviously look stunning. The construction of ItsMarloe is incredibly spacious and hits all the elements in the Ultimate Underground Bunker checklist. If you put under a zombie (crawler?) apocalypse, this could be the safest place to be. And if you follow their tutorial to the letter, you will notice that the modular design gives you plenty of space for future extensions. VIII. The Odd Diagonal Minecraft HomeWith enough time, experience and resources, anyone can build a mansion, a cottage, a cabin, and even a red brick mansion. But can you build diagonally? Reddit User and Minecraft Architect Swordsell_MC obviously can. He challenged himself to literally think outside the box about some fresh Minecraft home ideas. That's what it came with: a house with a diagonal-built right next to the front entrance. The overall result gives the house incredible depth, dimension, and definitely character.
